Abstract

*It seemed interesting to summarize the found results in *Ophiocomina nigra* and *Antedon bifida* (Echinodermata) from a point of view of genomic evolution : 2 MHC class I genes (HLA-E, HLA-B), 2 MHC class II genes (HLA-DRB1, HLA-DQB1) appeared in them at the Cambrian period.*

INTRODUCTION

Recently, it was shown that, HLA-DRB1 gene existed in *Ophiocomina nigra* (Ref.1), so HLA-DQB1 gene (Ref.2). In the same manner we demonstrated the existence of HLA-E, HLA-B genes

in *Ophiocomina nigra* and *Antedon bifida* (Ref.2). It was correlated to the presence of IPA (Invertebrate Primitive Antibody) in Echinodermata.(Ref .3, 4). Genesis of these works were recalling in this paper.

MATERIALS AND METHODS

Animals

Ophiocominanigra (Ophuirid) *Antedonbifida* (Crinoïd) were obtained at the station « Of Biologie Marine of Roscoff » France.

Obtention of Ophuirid and Crinoïd MRNA

Digestive coeca were excised from their bodies and mRNA were obtained from Uptizol (Interchim) then quality controls were operated.

Sequencing

Sequencing was made on Illumina Next Seq 500 with paired-end : 2. 75 bp.

Transcriptome was assembled from RNA-Seq fastq files using Trinity v2.1.1 (Ref.5) with default parameters. A BLAST database was created with the assembled transcripts using makeblastdb application from ncbi-blast+ (v2.2.31+). The sequences of transcripts of interest were then blasted against this database using blastn application from ncbi-blast+ (Ref.6) with parameter word_size 7.

RESULTS

MHC gene Class II appears in the genome of *Ophiocomina nigra* and *Antedon bifida* one, in a significant manner. The transcriptomes are given with their sequences. *Ophiocomina nigra* results show the «HLA-DRB1» transcriptome which possesses a short sequence but a significative one.

CONCLUSION

From data to data it appears that Echinodermata , possesses a sophisticated immune system.

We recall the existence of B lymphocytes, T lymphocytes with the sea star as model of study,

the IPA (Invertebrate Primitive Antibody) we meet in Asterids, Ophurids, Crinoids, the Iggkappa genes, in these last ones such as Fag gene, Fc receptor gene, Cr gene, at last **MHC class I, class II genes.**
